Emmanuel Omowumi

Senior Data Analyst | SQL, Python, Power BI | Fintech and Commercial Analytics
Ibadan, Nigeria | emmanueloluwatobi2015@gmail.com | linkedin.com/in/emmanuel-omowumi-98bb03139 | github.com/Nuelwumi2024

PROFESSIONAL SUMMARY

Data analyst with 3+ years of experience in business intelligence, SQL reporting and dashboard development, now working in sales analytics. M.Sc. in Microbiology, with earlier experience in laboratory and quality assurance, which built a habit of validating data, tracing deviations to root cause and reporting clearly to management. Builds end-to-end analytics projects on Nigerian data (inflation, payments, distribution, customer reviews) and Power BI case studies in retail and HR and a healthcare readmissions analysis on real Medicare data, with tested code, stated limitations and costed recommendations a decision-maker can act on.

CORE SKILLS

Analysis & BI: SQL (MySQL, SQL Server), Power BI (DAX, Power Query), Tableau, Excel
Programming: Python (pandas, NumPy, Matplotlib), R (tidyverse), pytest
Data engineering: ETL/ELT design, star-schema modelling, dbt, Airflow, data-quality testing, GitHub Actions CI
Methods: KPI and cohort analysis, forecasting, statistical testing and regression, risk metrics, root cause analysis
Domains: Sales analytics, healthcare analytics, fintech (payments, fraud, lending), FMCG distribution, quality assurance

PROFESSIONAL EXPERIENCE

Data Analyst, Sales Department | Learn Africa Plc

June 2025 - Present | Nigeria

- Turn sales data into reporting and insight that supports sales decisions, using SQL, Power BI and Excel.
- Present findings to the sales team as clear summaries and recommendations.

Senior Data Analyst | Softrays Information Technology

January 2023 - March 2025 | Ilorin, Kwara State, Nigeria

- Built and maintained Tableau and Power BI dashboards that tracked KPIs for projects and teams.
- Analysed customer survey data in Excel, R and Python to identify trends that shaped marketing strategy.
- Cleaned and prepared data for data science work, improving data accuracy and model performance.
- Queried relational databases with SQL for filtering and aggregation; applied hypothesis testing, correlation and regression.
- Worked with cross-functional teams to turn findings into reports, presentations and recommendations.

Quality In-Process Analyst | Olam

February 2021 - December 2023 | Ilorin, Kwara State, Nigeria

- Analysed microbiological and quality test data from raw materials, in-process samples and finished livestock-feed products to detect and prevent contamination.
- Led risk assessments and root cause analysis on quality deviations, and produced trend analysis and non-conformance reports for management.
- Wrote and rolled out SOPs and quality control procedures; kept production compliant with GMP, GHP and HACCP.

SELECTED PROJECTS

Portfolio of 12 projects with code, tests and write-ups: github.com/Nuelwumi2024

Nigeria Cost-of-Living Tracker | *Python, pandas, Power BI (DAX), pytest, GitHub Actions*

- Parsed 30+ years of National Bureau of Statistics CPI data (1995-2026) into a validated dataset; recomputed year-on-year inflation matches NBS to 0.01 percentage points.
- Found that the published index drops about 2.8% every January in 2025 and 2026 (no January fell by more than 0.9% in 1996-2024), flagged it, and showed results with a sensitivity case and a two-scenario outlook.
- Quantified purchasing-power loss and the real value of the minimum wage; delivered an executive brief and a Power BI data model.

github.com/Nuelwumi2024/nigeria-cost-of-living-tracker

FMCG Distribution Analytics (synthetic data) | *SQL, Python, Power BI (DAX), pytest*

- Analysed margin, product mix, channels, stock-outs and rep attainment in SQL; found gross margin falling from 18.8% to 11.8% as costs outran prices.
- Detected 23 silent outlets (about NGN 9.2M annual revenue at risk) and validated the detector and the stock-out loss estimate (within 11%) against the generator's known ground truth.

github.com/Nuelwumi2024/nigeria-fmcg-distribution-analytics

Nigerian App Review Analysis | *Python, pandas, regex NLP, pytest*

- Classified 34,000 public reviews of 7 fintech, bank and telecom apps into nine complaint themes with an auditable rule set; login and verification problems were the top complaint (17.5% of 1-2 star reviews).
- Estimated the star-rating cost of each theme with confidence intervals and produced a ranked fix list per app; removed personal data and published aggregates only.

github.com/Nuelwumi2024/nigeria-app-review-analysis

Atlas Global Retail: Sales and Profitability Analysis (Power BI, synthetic data) | *Power BI, DAX, Power Query, star-schema modelling, Python*

- Built a four-page Power BI report (star schema, DAX measures, budget-vs-actual) on 9,818 order lines to explain why sales grew 43% while profit grew 6%; sales were within 1% of target but profit was 16% short.
- Traced the gap to discounting: lines discounted 30% or more sold $505K and lost $105K, and the average discount rose from 10.8% to 14.5%. Estimated that a 20% discount cap adds about $125K of profit (+26%) with volume held constant.

github.com/Nuelwumi2024/powerbi-global-superstore-analysis

The Black Friday Playbook: E-commerce Analytics (Power BI and Python, synthetic data) | *Python, pandas, Power BI, DAX*

- Built a customer, marketing and delivery analysis for a Nigerian online retailer (31,247 orders, 14,811 customers): RFM segmentation, CAC and 12-month customer value by channel, and a constant-naira view that cut headline growth from 92% to 50%.
- Found referral pays back 15.9x against 1.5x for influencers, 9.3% of orders are lost to failed payments and refusals, and Black Friday runs at a -6% margin; a 15% discount cap would turn last year's window from a loss to a profit.

github.com/Nuelwumi2024/powerbi-ecommerce-black-friday-playbook

HR Attrition and Workforce Analytics (Power BI, synthetic data) | *Power BI, DAX, Power Query, Python*

- Modelled 1,500 employee records in Power BI with DAX (tenure bands, attrition rate, replacement cost) across three report pages.
- Found 27.5% attrition concentrated in Customer Support (49%) and early-tenure staff; overtime lifted attrition from 23% to 38%. Costed it at about $13M and recommended five actions.

github.com/Nuelwumi2024/powerbi-hr-attrition-dashboard

Hospital Readmissions Analysis (real CMS Medicare data) | *Python, pandas, Matplotlib, Power BI (DAX)*

- Pulled the CMS Hospital Readmissions Reduction Program data through its public API (3,055 hospitals, 11,720 reported results) and estimated excess readmissions by condition, state and hospital.
- Found that heart failure and pneumonia drive 77% of excess readmissions, and that 561 hospitals (23.5%) worse than benchmark on at least 75% of their conditions generate 49% of it; a shuffle test showed this persistence is not chance.

github.com/Nuelwumi2024/hospital-readmissions-analysis

Data Engineering Projects (synthetic data) | *Python, SQL, dbt, Airflow, pytest, GitHub Actions*

- Naira Payments ETL: batch pipeline with a star schema that processed 117,891 raw records, quarantined 1,051 bad rows with reasons and removed 703 duplicates; the run fails unless row counts reconcile.
- Fintech dbt warehouse and fraud analysis: 8 models and 12 passing data tests with CI; showed fraud is about 2.9x likelier at night and that four simple rules catch 29% of fraud while reviewing 7.7% of traffic.

github.com/Nuelwumi2024/naira-payments-etl-pipeline

EDUCATION

M.Sc. Microbiology | Kwara State University, Malete | 2021 - 2023
B.Sc. Microbiology | Kwara State University, Malete | 2018 - 2020
B.Sc. Botany / Plant Biology | University of Ilorin | 2013 - 2017

TRAINING AND CERTIFICATIONS

- Microsoft PL-300: Power BI Data Analyst Associate (exam preparation in progress)
- Data Analysis and Business Intelligence with Microsoft Excel, Udemy (March 2026 - Present)
- Data Analytics Masters Certifications, Udemy (February 2025 - Present)
- Certified Data Analyst and Scientist (May 2024 - Present)
- Advanced Data Analytics Certifications, Google Data Analytics (April 2024 - Present)
- Advanced BI and DAX Modelling (Excel / Power Query)
